

C3D Kernel

Geometric Modeling
Toolkit For 2D & 3D
Software Developers

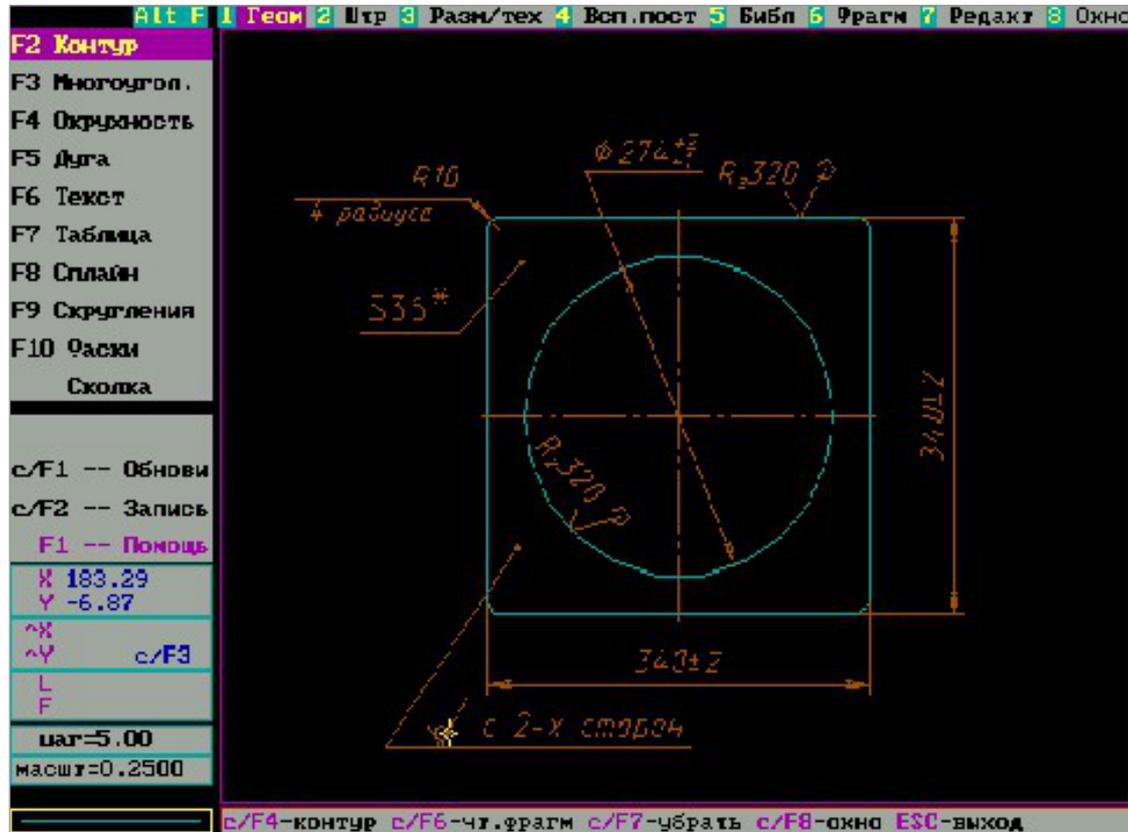

C3D History

1986, Kolomna Design Bureau

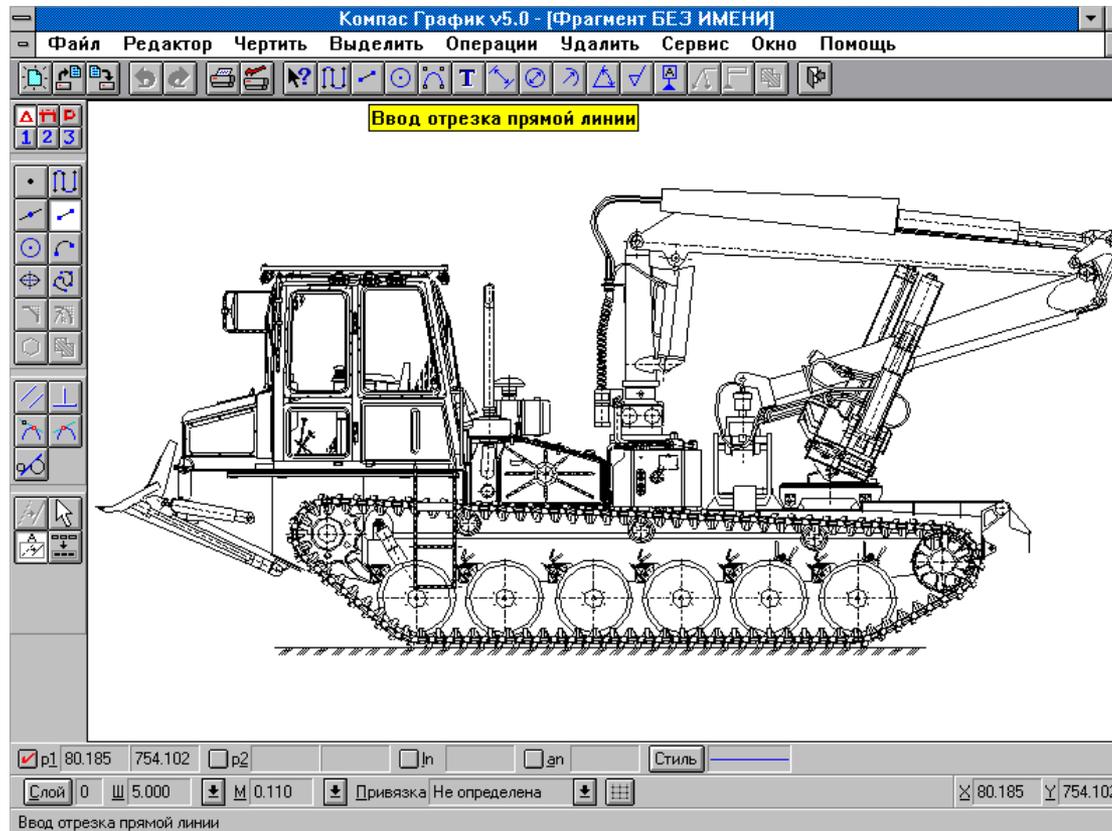

1989, ASCON Company

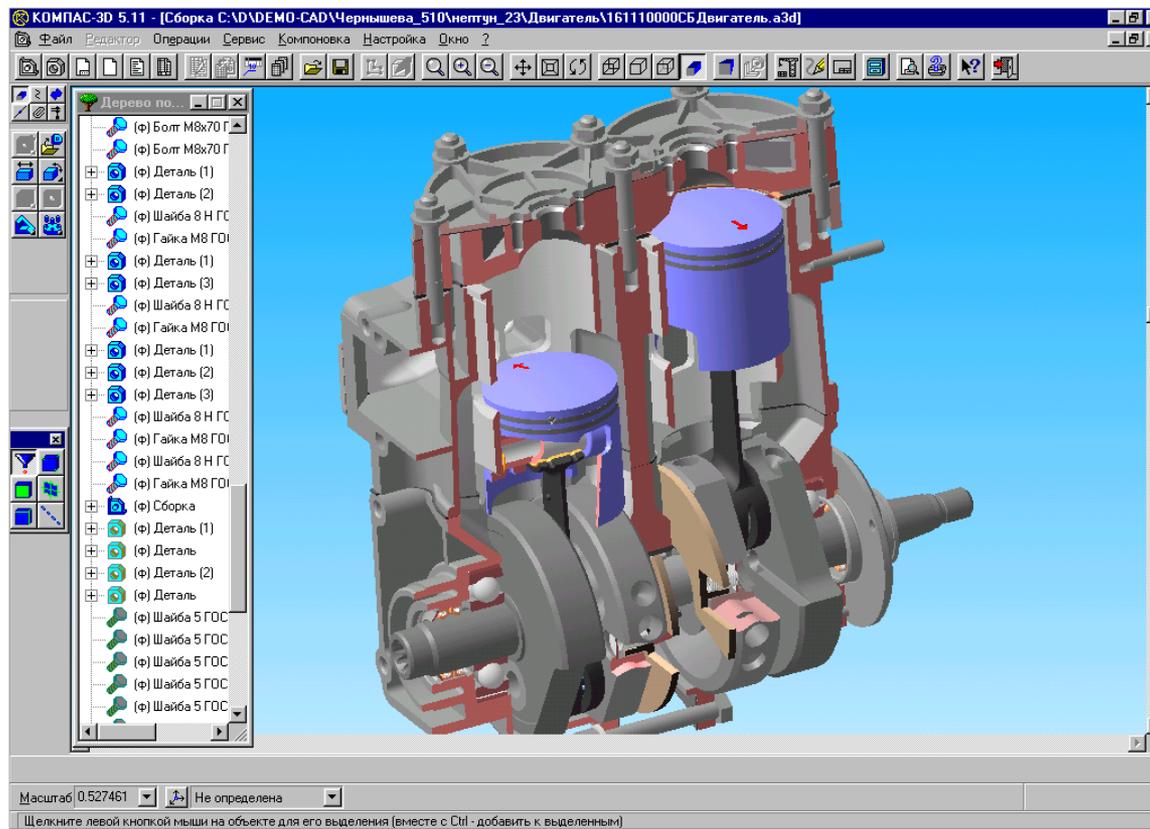

KOMPAS-Graphic for MS-DOS

1995, КОМПАС-Graphic for Windows

Start the C3D Project

2000, КОМПАС-3D

Mechanical CAD

Improvements

- 2000:** 3D solid modeling algorithms
- 2001:** Geometric constraint manager; data converter
- 2002:** Associative views of 3D models
- 2003:** Basic surface modeling features
- 2004:** Sheet metal modeling algorithms
- 2005:** Manifold solid modeling
- 2007:** Wireframe modeling
- 2008:** Kinematic joints implemented for modeling mechanisms
- 2009:** Support for geometric model attributes
- 2010:** Full-fledged surface modeling
- 2011:** Expansion to cross-platform support
- 2012:** Direct modeling elements
- 2013:** English documentation; test applications

2012

KOMPAS-3D — most popular 3D-CAD in Russia

70 000 seats

The mathematical division of ASCON became a separate company **C3D Labs** to develop and promote kernel

ASCON & C3D Labs Today

ASCON Group

Biggest Russian CAD/AEC/PDM developer with
30 offices, **6** developer's centres, **600** stuff on board
9000 enterprise customers

Key Industries

Automotive

Heavy Machinery

Aerospace and Defense

Agriculture

Oil Production and Power Generation

Manufacturing and Construction

Electronics and Engineering Industries

C3D Labs

Many customers worldwide

Development Partners: *ProtoTech Solutions (India), Rubius*

Resellers: *LEDAS, Solar Tech (Korea), intrinSIM (USA)*

Seminars and events are held across the world

What is C3D?

What is C3D?

C3D Geometric Kernel

It offers functions for 3D solid and hybrid modeling, sketching, and 2D drawing

C3D Parametric Kernel

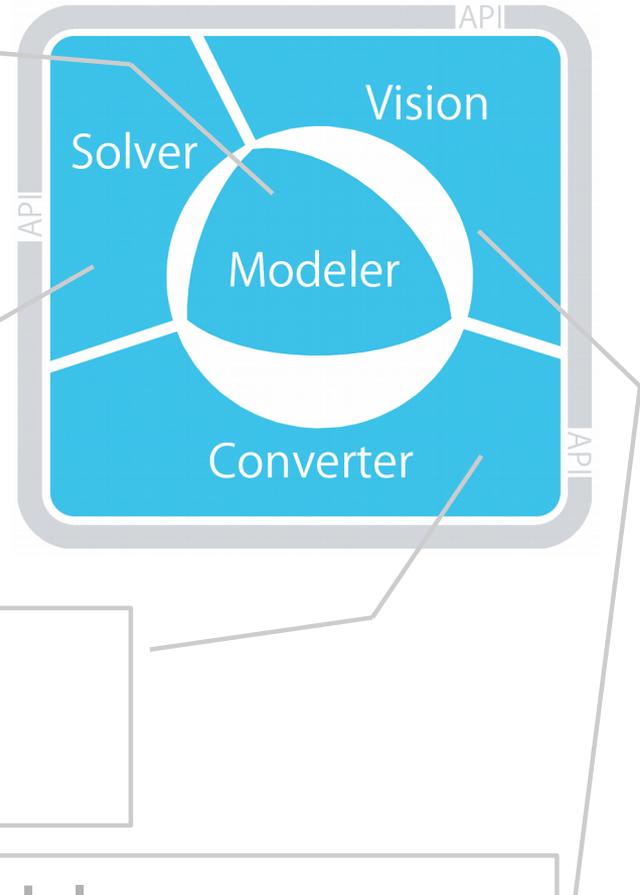

It boasts functions for creating and solving parametric constraints on 2D and 3D geometry

C3D Conversion Module

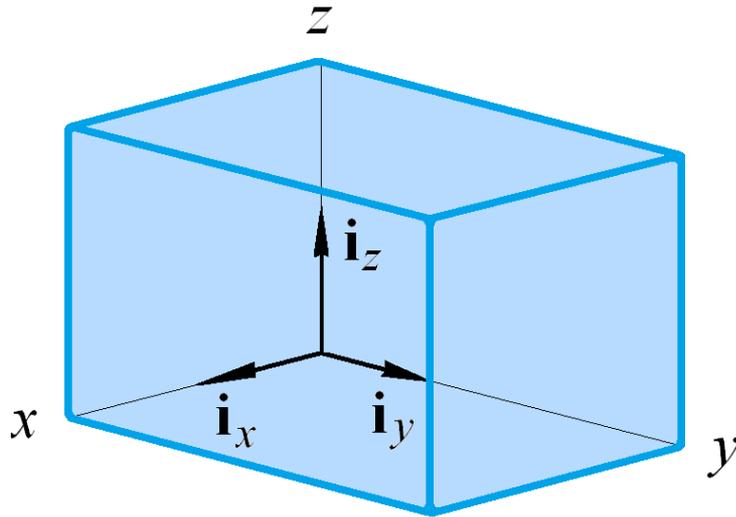

It reads and writes geometric models in all primary exchange formats

C3D Visualization Module

performs detailed visualization of geometric models and provides interaction with the interface of CAD systems

C3D Kernel

$$\mathbf{r}_1(u_1, v_1) = \mathbf{p} + u_1 \mathbf{i}_x + v_1 \mathbf{i}_y;$$

$$\mathbf{r}_2(u_2, v_2) = \mathbf{p} + u_2 \mathbf{i}_y + v_2 \mathbf{i}_z;$$

$$\mathbf{r}_3(u_3, v_3) = \mathbf{p} + u_3 \mathbf{i}_x + v_3 \mathbf{i}_z;$$

$$\mathbf{r}_4(u_4, v_4) = \mathbf{p} + u_4 \mathbf{i}_x + v_4 \mathbf{i}_y + z \mathbf{i}_z;$$

$$\mathbf{r}_5(u_5, v_5) = \mathbf{p} + u_5 \mathbf{i}_y + v_5 \mathbf{i}_z + x \mathbf{i}_x;$$

$$\mathbf{r}_6(u_6, v_6) = \mathbf{p} + u_6 \mathbf{i}_x + v_6 \mathbf{i}_z + y \mathbf{i}_y;$$

$$0 \leq u_1 \leq x, \quad 0 \leq v_1 \leq y,$$

$$0 \leq u_2 \leq y, \quad 0 \leq v_2 \leq z,$$

$$0 \leq u_3 \leq x, \quad 0 \leq v_3 \leq z,$$

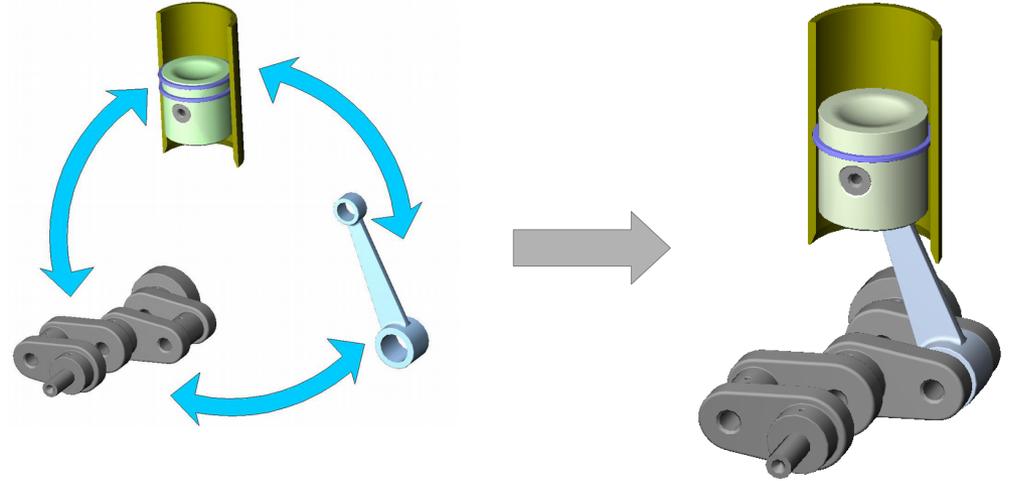

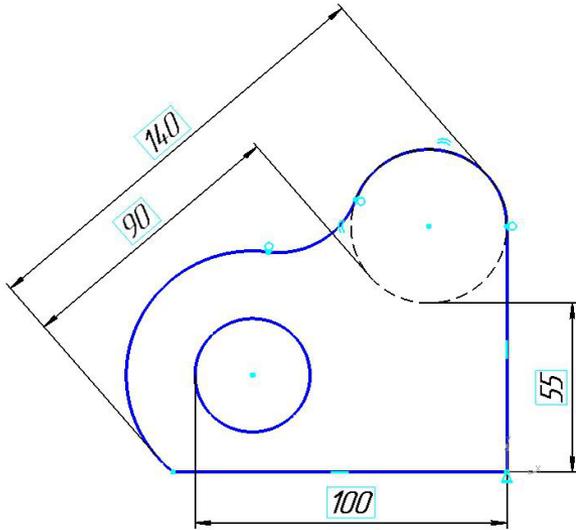

$$0 \leq u_4 \leq x, \quad 0 \leq v_4 \leq y,$$

$$0 \leq u_5 \leq y, \quad 0 \leq v_5 \leq z,$$

$$0 \leq u_6 \leq x, \quad 0 \leq v_6 \leq z.$$

Used in software products as the component responsible for geometric **model construction** and constructed **model control**

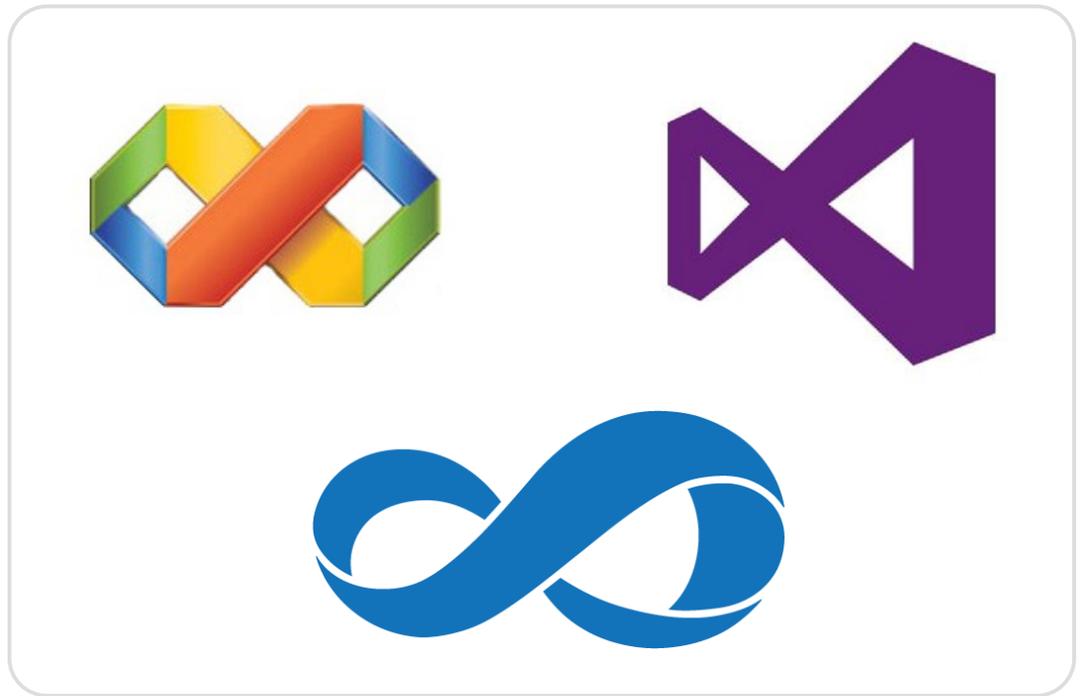

C3D Kernel

Used in software products as the component responsible for geometric **model construction** and constructed **model control**

C3D Kernel

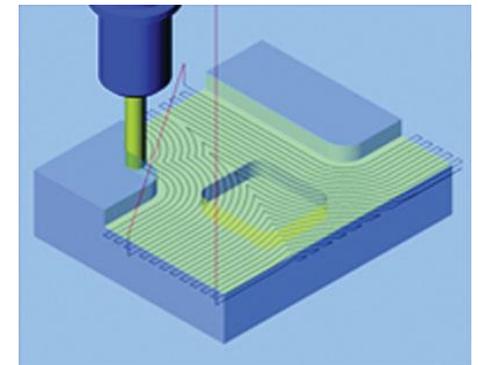

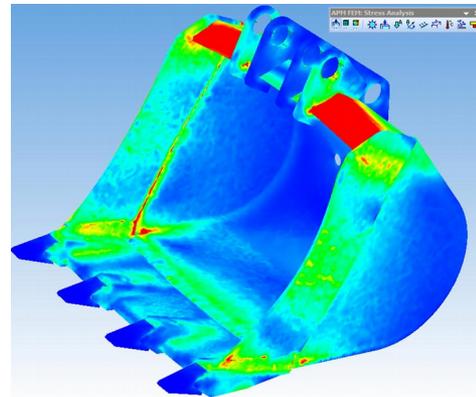

Originally **developed** by ASCON Group, now by **C3D Labs**,
using **C++** and written in *Microsoft Visual Studio*

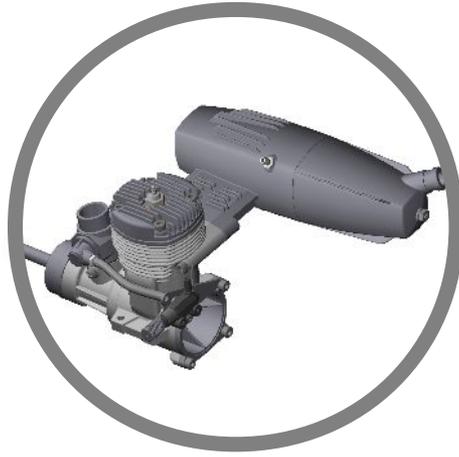

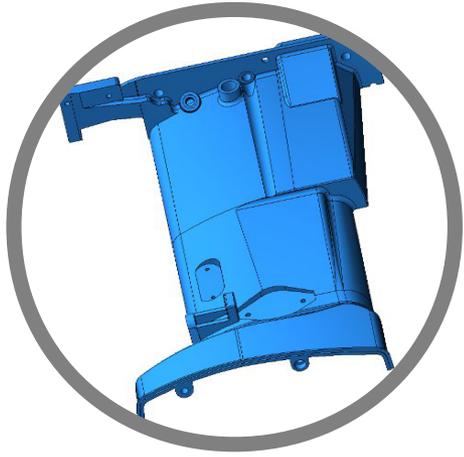

C3D Kernel

The most known software in which **C3D** is typically used are

- computer aided design (**CAD**) systems
- computer-aided manufacturing (**CAM**) systems
- computer-aided engineering (**CAE**) systems

Planar Projections

C3D Solver

Modeling with Constraints

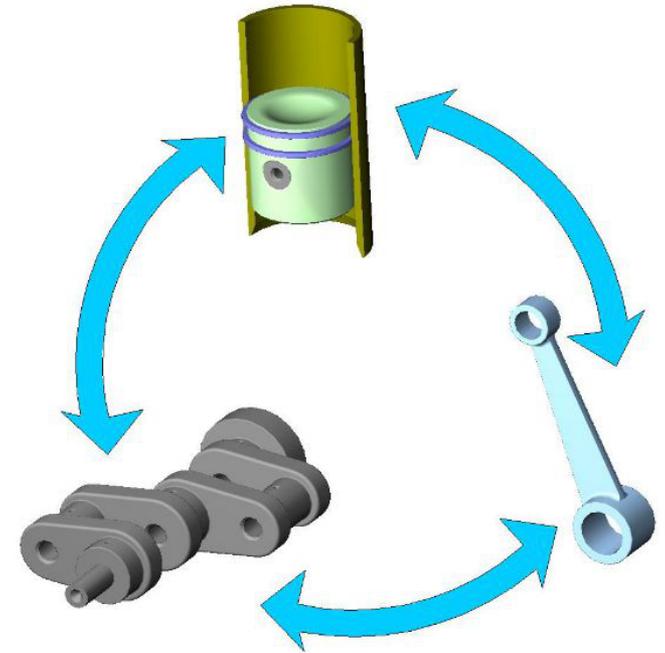

Primary features of C3D's constraint-based modeling:

Relationships between geometric objects **not subject to a strict order**

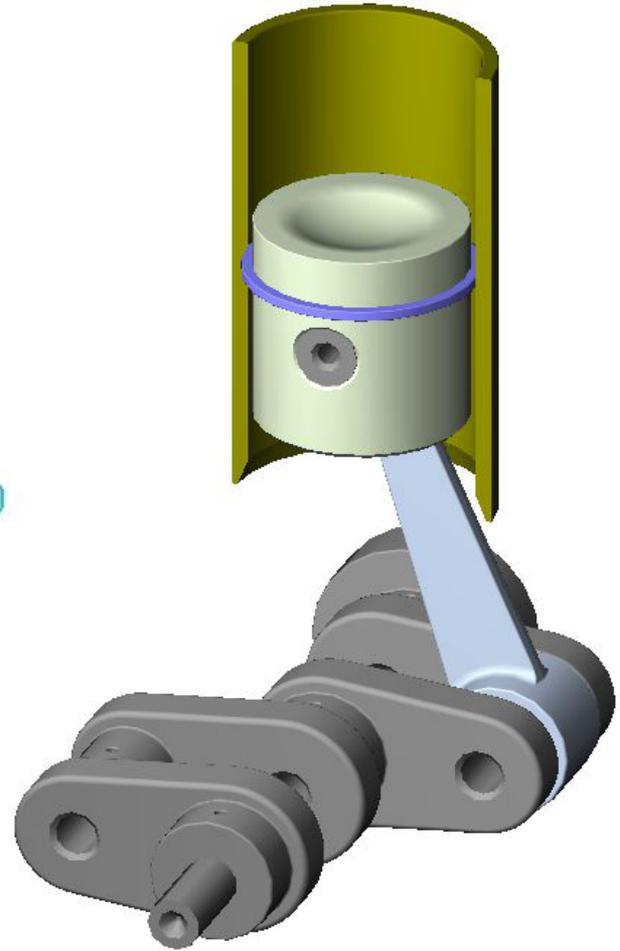

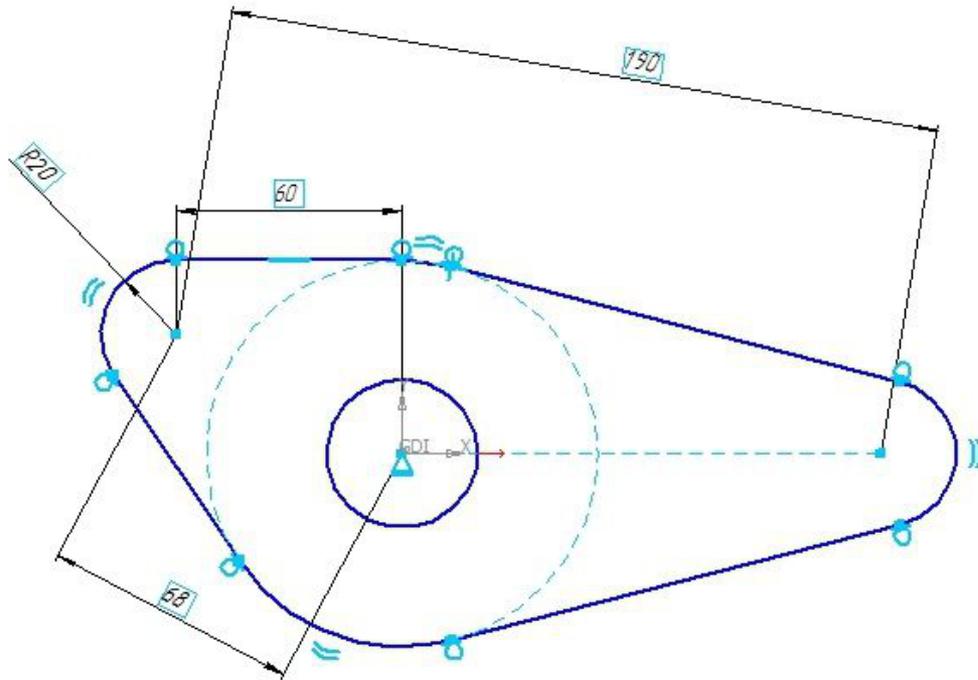

Declarative approach means there is no need to plan model creation steps in advance

Geometric constraints allow **quick changes** to existing models

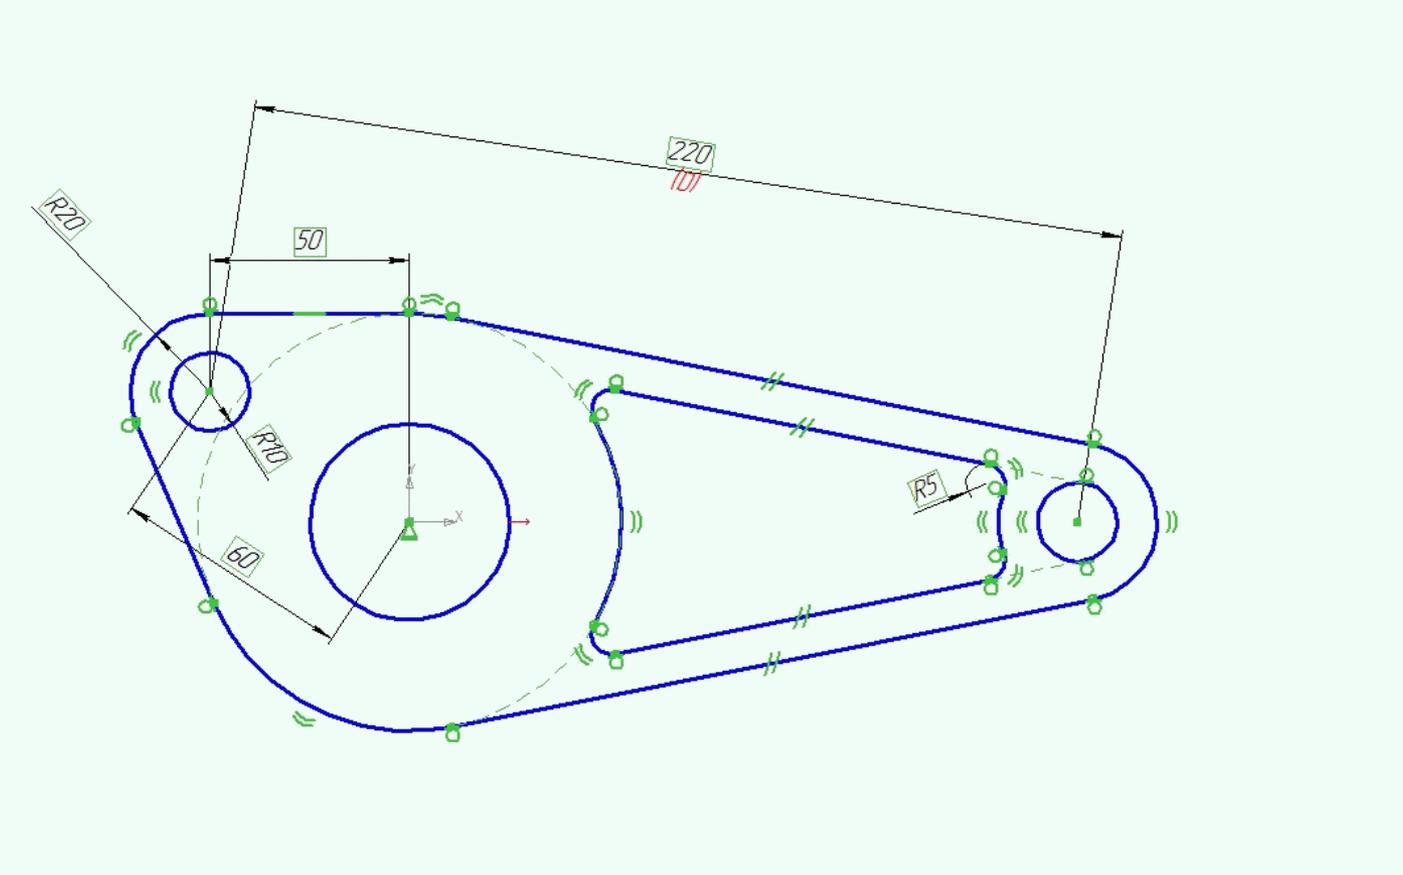

Models can be parametric, with driving dimensions assigned in a user-friendly manner

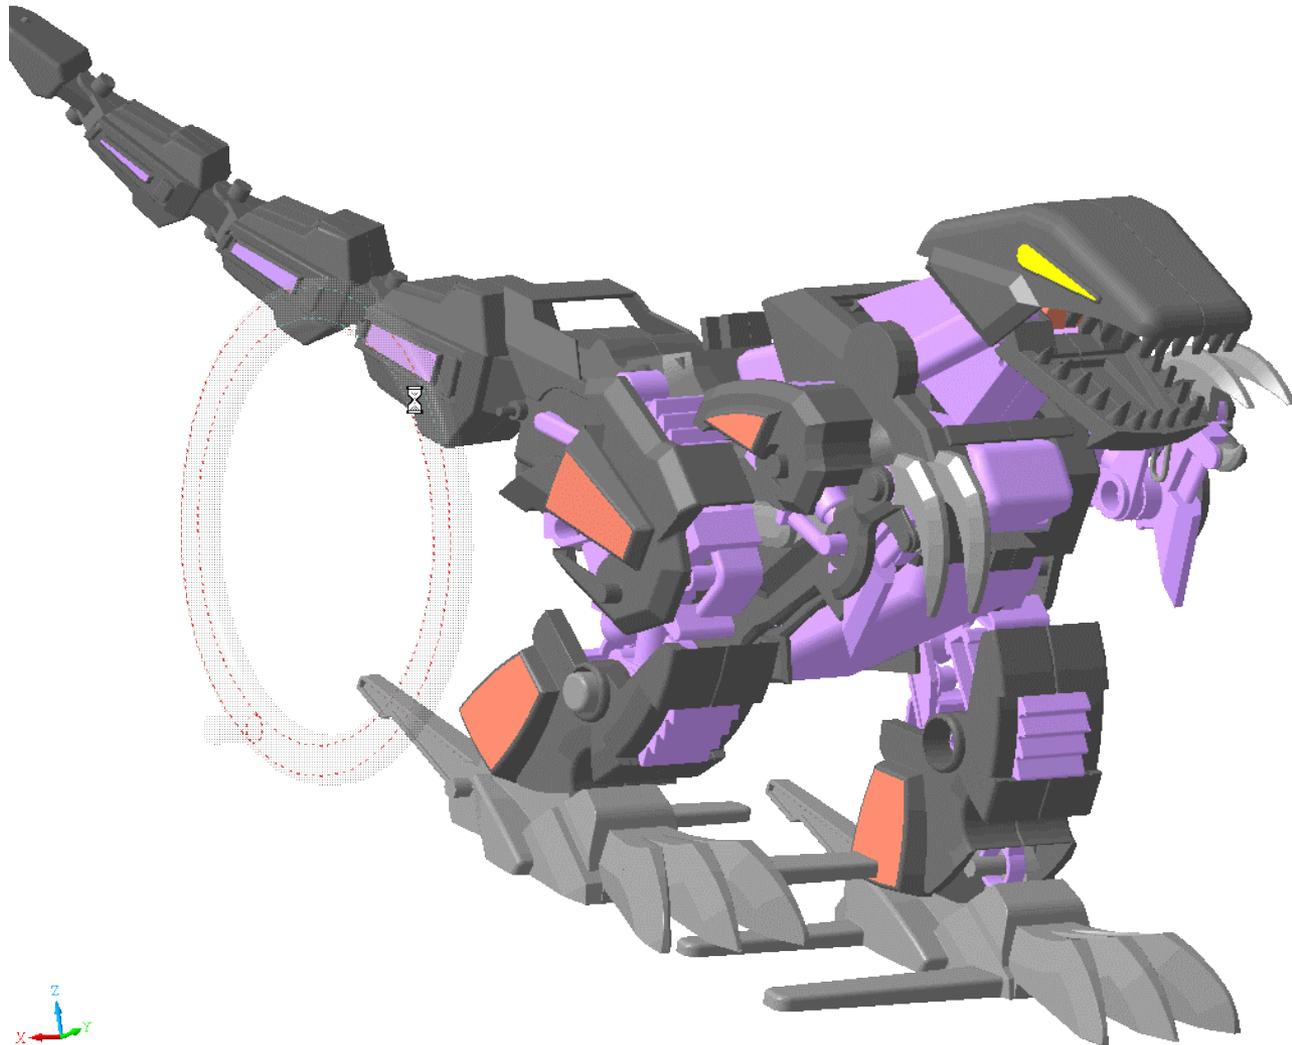

Solving Constraint Satisfaction

Constraint-Driven Parametric Drawings

Assembly Modeling and Kinematic Simulation

New User Manual

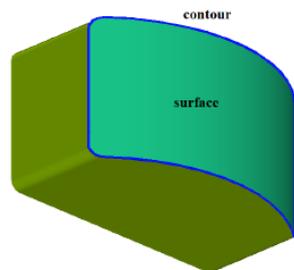

Рис. М.1.4.12.

На рис. М.1.4.13 приведено тело, полученное выдавливанием контура на криволинейной поверхности, приведенного на рис. М.1.4.12.

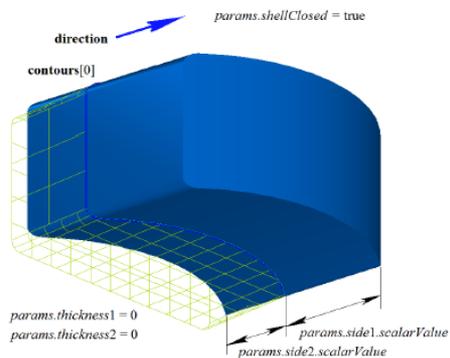

Рис. М.1.4.13.

На рис. М.1.4.14 приведено тонкостенное тело, полученное выдавливанием контура на криволинейной поверхности, приведенного на рис. М.1.4.12.

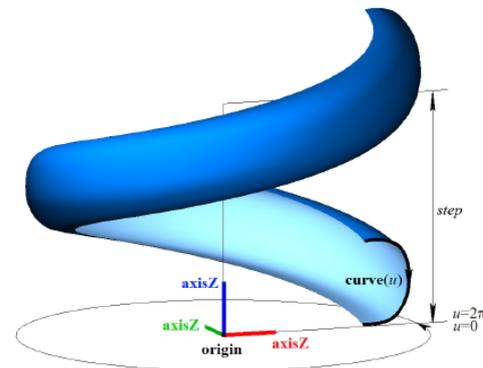

Рис. О.5.10.1.

Для граничных значений второго параметра поверхности должно соблюдаться неравенство: $v_{min} < v_{max}$.

О.5.11. Кинематическая поверхность MbEvolutionSurface

Класс MbEvolutionSurface объявлен в файле surf_evolution_surface.h.

Кинематическая поверхность MbEvolutionSurface принадлежит к группе поверхностей движения MbSwepSurface. Кинематическая поверхность является общим случаем поверхности движения с произвольной направляющей кривой. Поверхность вращения описывается образующей кривой MbCurve3D* curve, направляющим объектом MbCurve3D* spine, положением начала направляющей MbCartPoint3D origin. У поверхности есть еще некоторые данные, которые не обязательны и служат для ускорения работы методов поверхности.

Первый параметр поверхности и совпадает с параметром образующей кривой curve. Первый параметр поверхности принимает значения на отрезке u_{min} - u_{max} , который соответствует области определения образующей кривой. Поверхность может быть периодической по первому параметру, если периодической является образующая кривая.

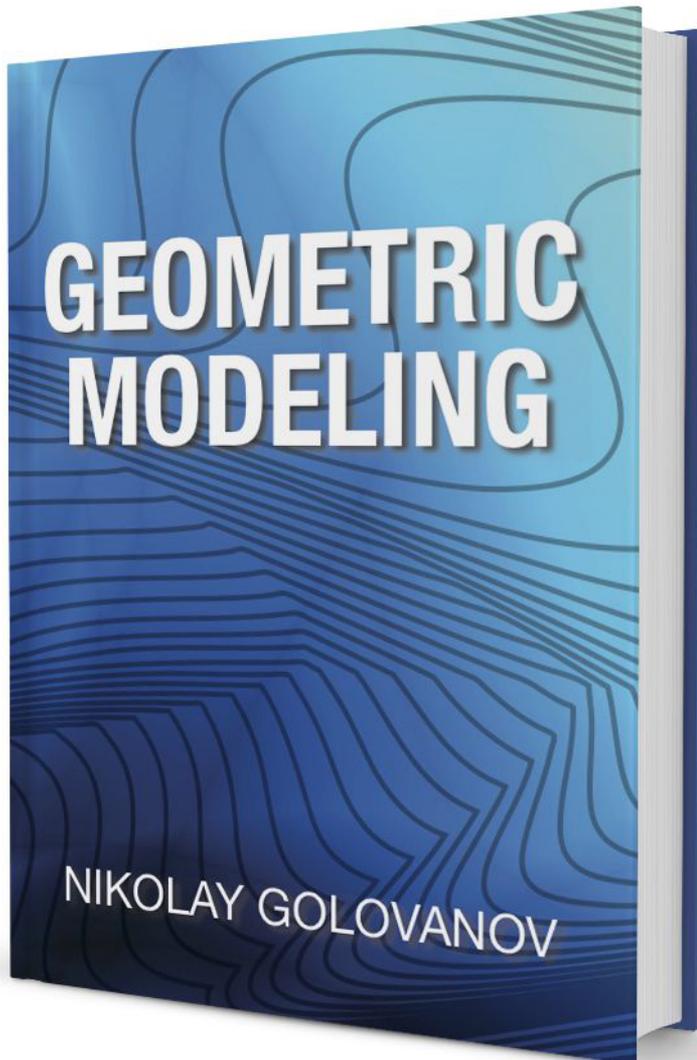

Направляющий объект spine заменяет собой направляющую кривую, построен на базе кривой и отличается от последней тем, что может генерировать локальную систему координат, связанную с кривой. Второй параметр поверхности v совпадает с параметром кривой направляющего объекта spine. Второй параметр поверхности принимает значения на отрезке v_{min} - v_{max} , который соответствует области определения направляющей кривой. Поверхность может быть периодической по второму параметру, если периодической является направляющая кривая.

В методе PointOn(double u, double v, MbCartPoint3D & s) радиус-вектор поверхности s описывается векторной функцией

Geometric Modeling by Nikolay Golovanov

Ph.D. in Mechanical Engineering

"Golovanov has created a text that will enable any serious student of geometric design to grasp the full power and beauty of the mathematics behind this essential set of tools, and put them to work. I am deeply impressed by the logical and methodical presentation, and by the clarity of the teaching. Highly recommended!"

Joel N. Orr, Ph.D.

"Geometric modeling continues to grow in importance... Understanding the constructs that underlie geometric modeling will place students and developers at the forefront of these new advancements. Nikolay Golovanov has paved the way to that understanding with this comprehensive presentation."

Ken Versprille, Ph.D.
